

Sun USA
Awning

Awning windows are similar to Casements with the exception of their sashes opening outward from the bottom of the window with pivot points near the top.

A dual lever latching system releases the left and right side sash latches. A folding operator handle accesses the crank-out mechanism to open and close the sash.

Common configurations include an Awning with a Fixed Lite above it or up to four Awnings mulled on top of each other. Other combinations are possible.

The standard jamb depth is 4-9/16". A jamb depth of 6-9/16" is achieved with 2" extensions.

Several grille systems are available to add lite division to the glass area. See the Grille Options section later in this guide for more information.

An interior mounted screen is available to help keep out insects when the sash is open.

Other options include exterior colors, exterior trim, interior finishes, and additional jamb options. More information is detailed later in this guide.
