Nashville, Tennessee

**PROJECT TYPE:** FULL FRAME  
REPLACEMENT

**BUILDER:** MESSER CONSTRUCTION

**ARCHITECT:** KLINE SWINNEY  
ASSOCIATES

**SUN WINDOWS PRODUCTS**

**USED:**  
FIXED AND OPERABLE CASEMENT

### Project Description

Hume Fogg high school, located in downtown Nashville, is ranked number 77 in the National High School Rankings and number 2 in the state of Tennessee. The project was completed in phases, with work done at night and on weekends. The project started at the beginning of summer break 2017 and ended around January of 2018. The project, included paint and asbestos abatement, which caused the project to take a little while longer considering the large number of windows. The project took about 90 business days from the time the windows were measured to the time they were installed.

### Unique Solutions and Obstacles

The blueprints for the project dated back to the early 1900s and were used to establish the original style of the windows used in the building. The architect dictated the use of a unique glass package in some of the units to provide no Solar Heat Gain and to conceal ceiling transitions.
